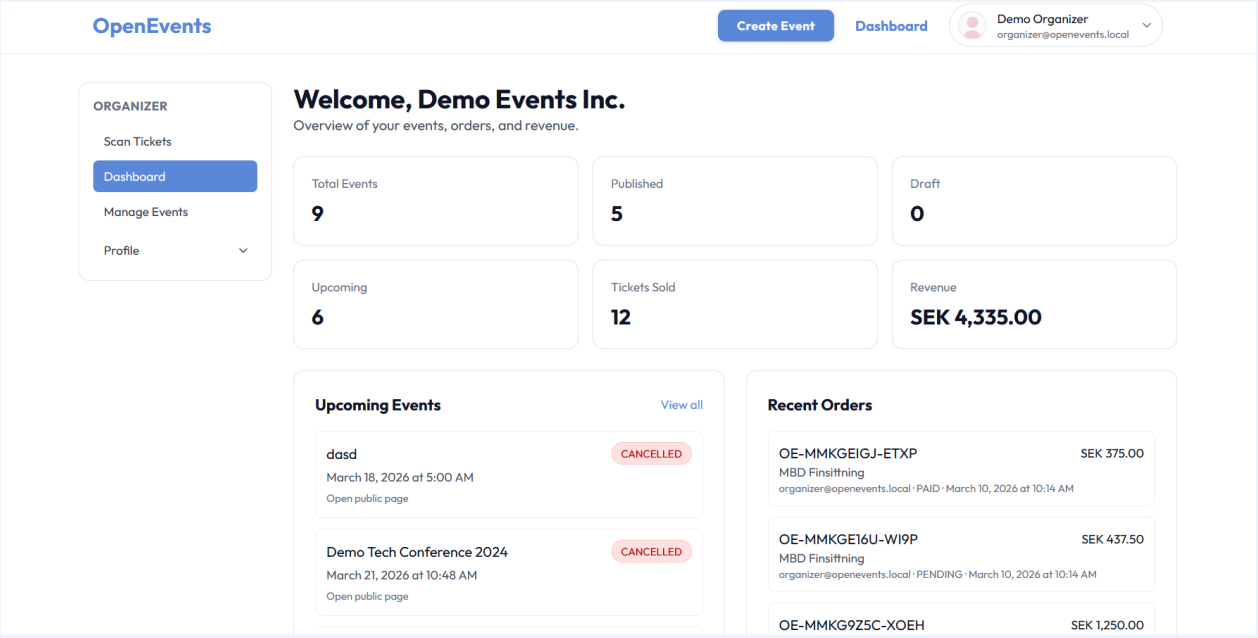
SECTION 01

What is OpenEvents?

OpenEvents is an open-source event management and ticketing platform. It was built for Streaming Tech Sweden 2026 and is designed to grow into a general-purpose tool for any event organizer.



Dashboard home — overview cards and sales chart

Key Capabilities

Event Creation	Create and publish events with full control over visibility, dates, and location.
Ticketing	Multiple ticket types, capacity limits, and flexible sales windows.
Discount Codes	Percentage, fixed-amount, free-ticket, and invoice codes.
Speakers & Agenda	Add speakers, build a session schedule, and reorder with drag-and-drop.
Online Payments	Card payments via Stripe, users write emails to request invoice payment.
PDF Tickets	QR-coded tickets delivered by email and available for download.
Analytics	Real-time sales dashboard with revenue charts and per-event breakdowns.
QR Check-In	Scan attendee QR codes at the door for fast, real-time check-in.

SECTION 02

Getting Started: Account & Roles

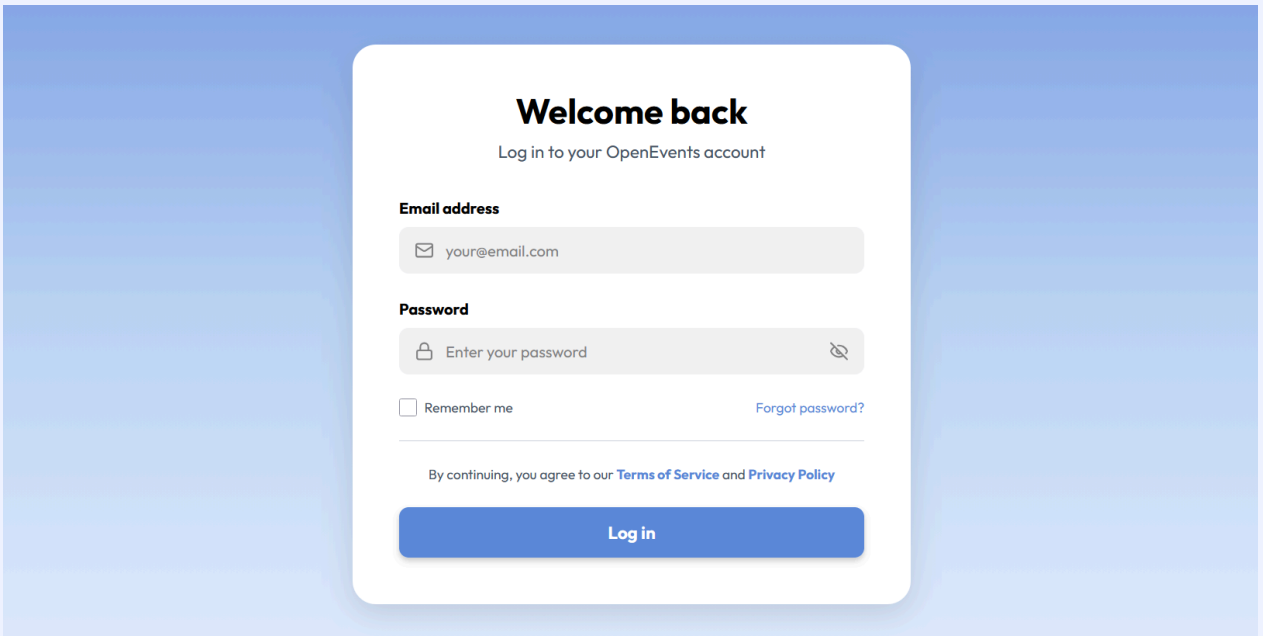
Pre-made accounts:

Role	Email	Password
Super Admin	admin@openevents.local	Admin123!
Organizer	organizer@openevents.local	Organizer123!

OpenEvents ships with 2 demo accounts previously used for testing. The first thing an organizer team should do is log in as a Super Admin to add new users and make them organizers.

Signing In

Sign in with your email address and password at events.apps.osaas.io. Existing Super Admin must grant you the Organizer role before you can sign in and create events.



Registration / login screen

User Roles

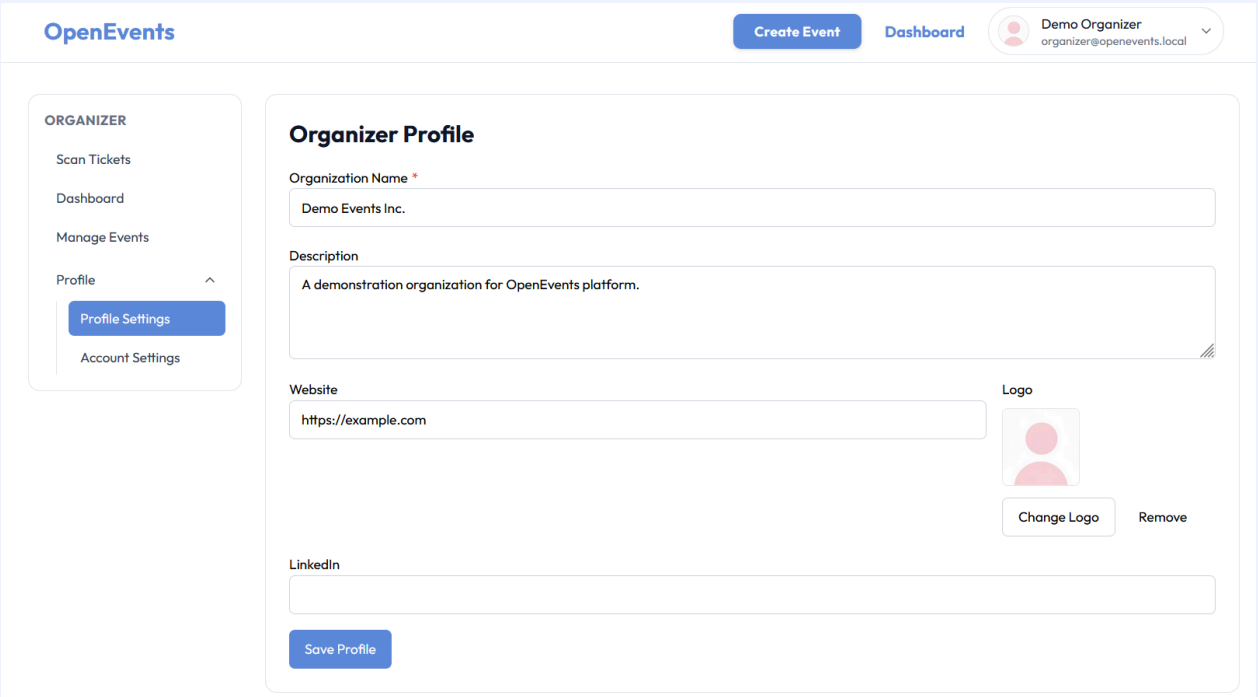
Organizer
Can create and manage events, configure tickets, view sales data, and run check-in.

Super Admin
Full platform access: manage all events, manage users, assign roles, and view platform-wide stats.

NOTE Ticket buyers (attendees) do NOT need an account. Checkout is fully guest-based — buyers receive their tickets on the confirmation page and by email.

Organizer Profile

Once you have Organizer access, fill in your profile: organization name, description, logo, website, and social links. This information may appear on your public event pages.

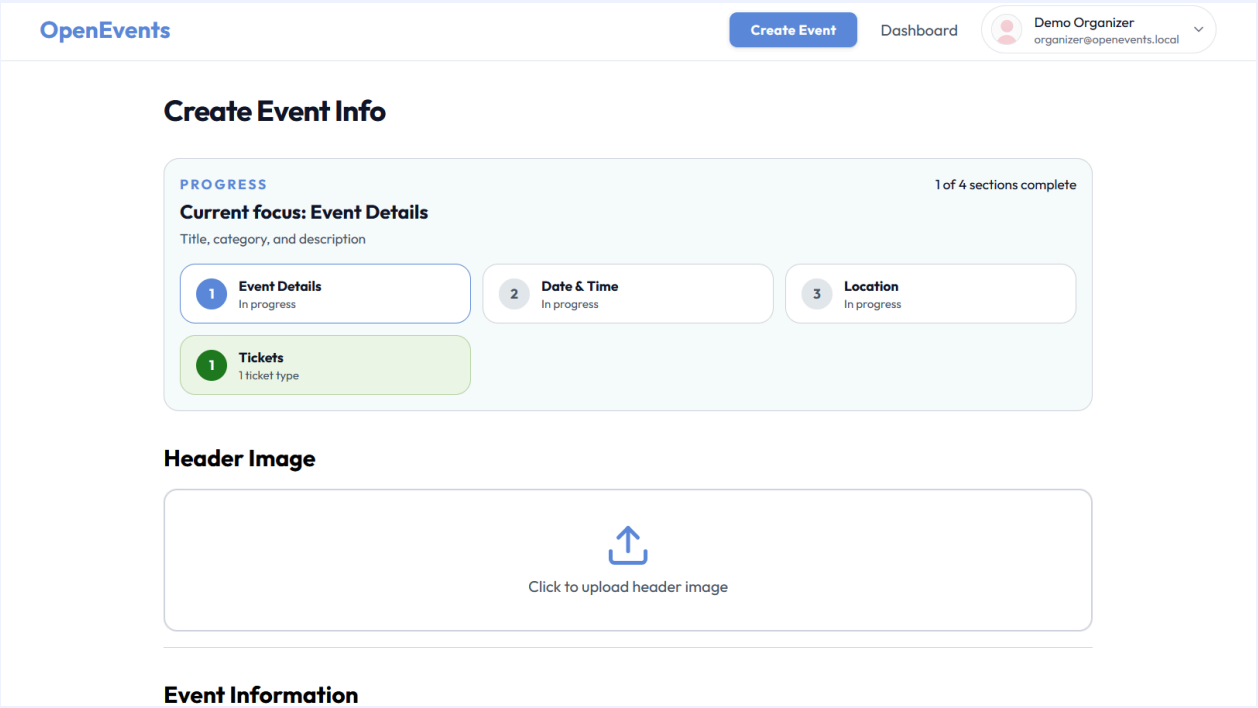


Organizer profile settings page

SECTION 03

Creating an Event

Click “Create Event” located at the header at the top of the page. Work through the sections presented. You can save as a Draft at any time and return to finish later.



New event form — basic details tab

Step-by-Step

1. Basic details — Header image, title, description, start/end dates and times, timezone.
2. Location — Physical (venue, address, city, country), Online (URL), or Hybrid.
3. Ticket types — Create different tickets for different attendees.
4. Discount codes — Set up promo codes.
5. Group discounts — Set up group discounts.
6. Speakers — Add detailed information about event speakers.
7. Cover image — Upload a banner image for the event page.

Draft vs. Published

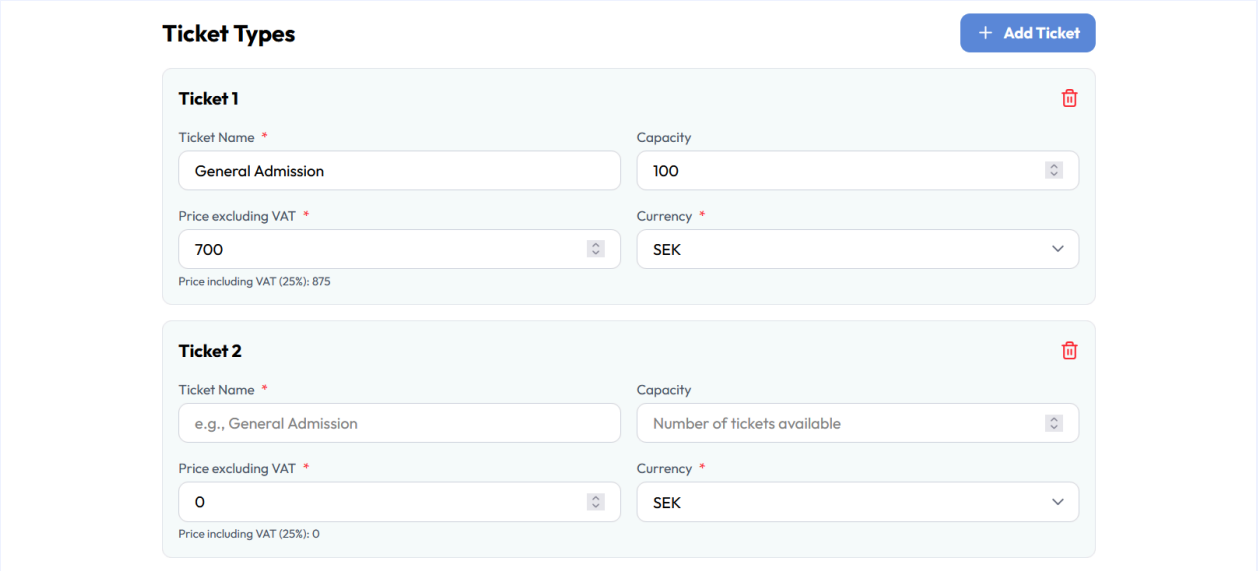
Save as Draft while you're still preparing. Switch to Published when you're ready for ticket sales to go live. You can always unpublish or cancel an event from your Dashboard.

Event status lifecycle: Draft → Published → Completed / Cancelled

SECTION 04

Managing Tickets

The tickets tab when creating your event lets you create and manage ticket types.



Tickets tab — ticket type list and 'Add ticket' button

Creating a Ticket Type

- **Name —** Visible on the checkout page.
- **Price & currency —** Set to 0 for free tickets.
- **Capacity —** Maximum number of tickets of this type available.

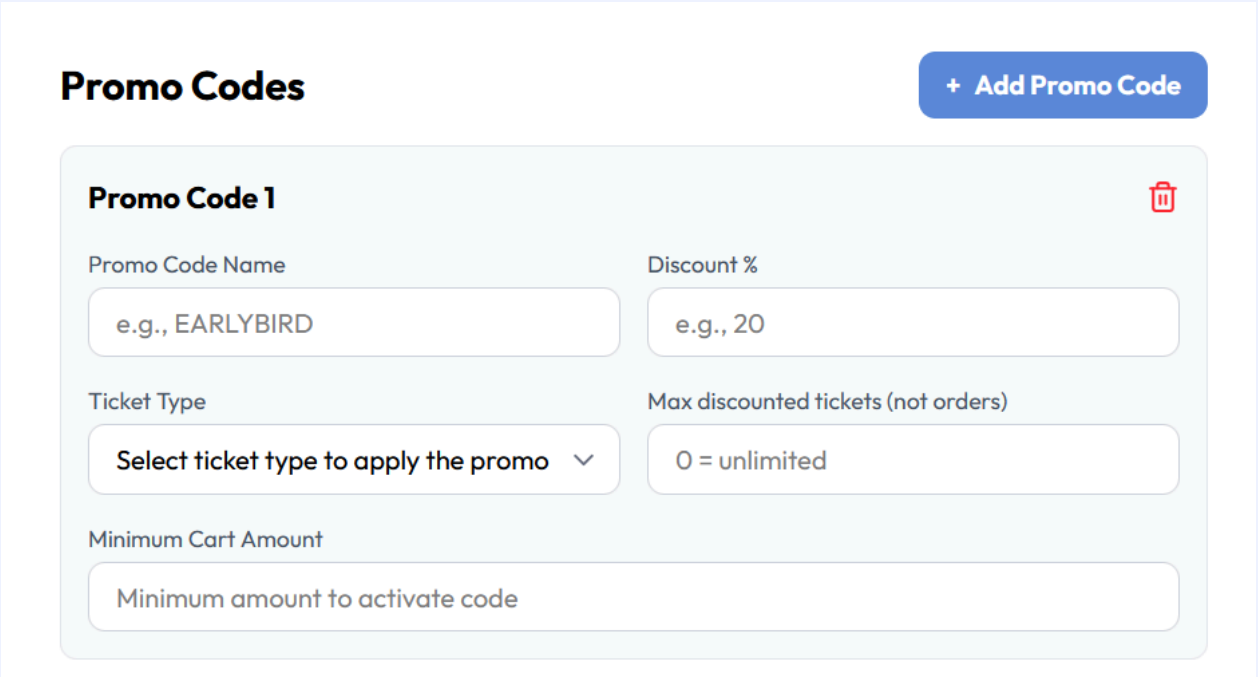
If you want to change any of the ticket values afterwards, you can always edit the event and make your changes.

NOTE Editing a ticket type after sales have started will not affect existing orders.

SECTION 05

Discount Codes & Group Discounts

Navigate to the Discounts tab within your event. Codes can be shared privately or announced publicly.



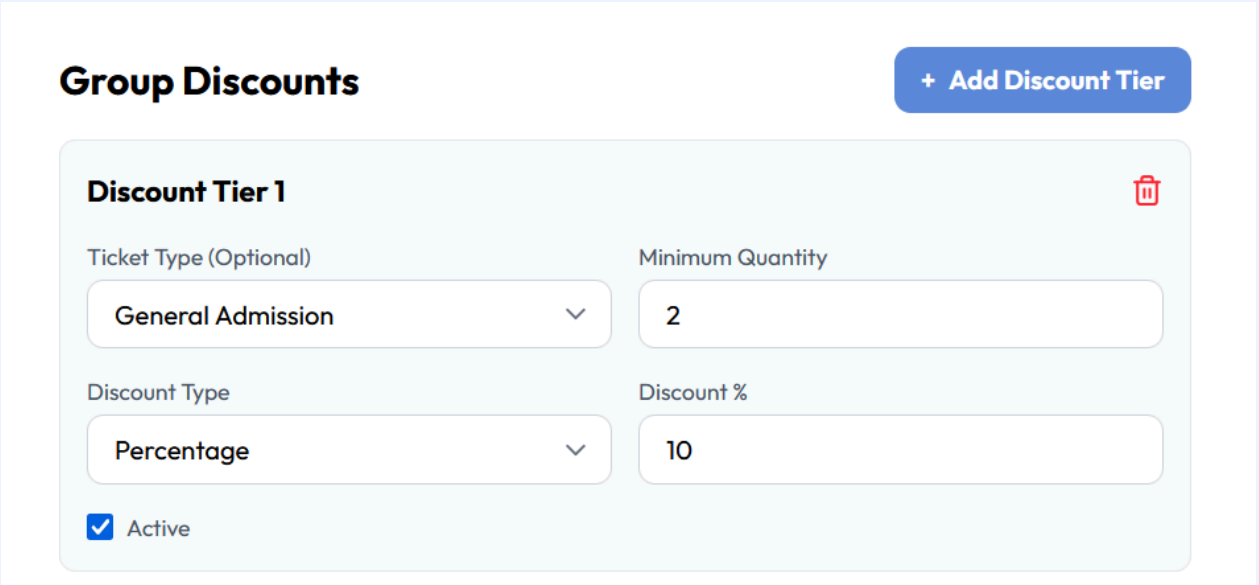
Promo codes tab — code list and creation form

Discount Types

Discount %	e.g. 20% off the ticket price
Free Ticket	Setting the % to 100 reduces the price to zero

Options & Restrictions

- **Usage limit —** Cap how many times a code can be redeemed. (How many tickets can be discounted)
- **Ticket type lock —** Restrict a code to specific ticket types only.
- **Minimum cart amount —** Restrict a code to only work after a certain amount of tickets are added to the cart.



Group discounts creation form

Group Discounts

Group discounts apply automatically when a buyer adds a qualifying quantity to their order — no code required.

In this example: Buy 2 or more tickets, get 10% off.

SECTION 06

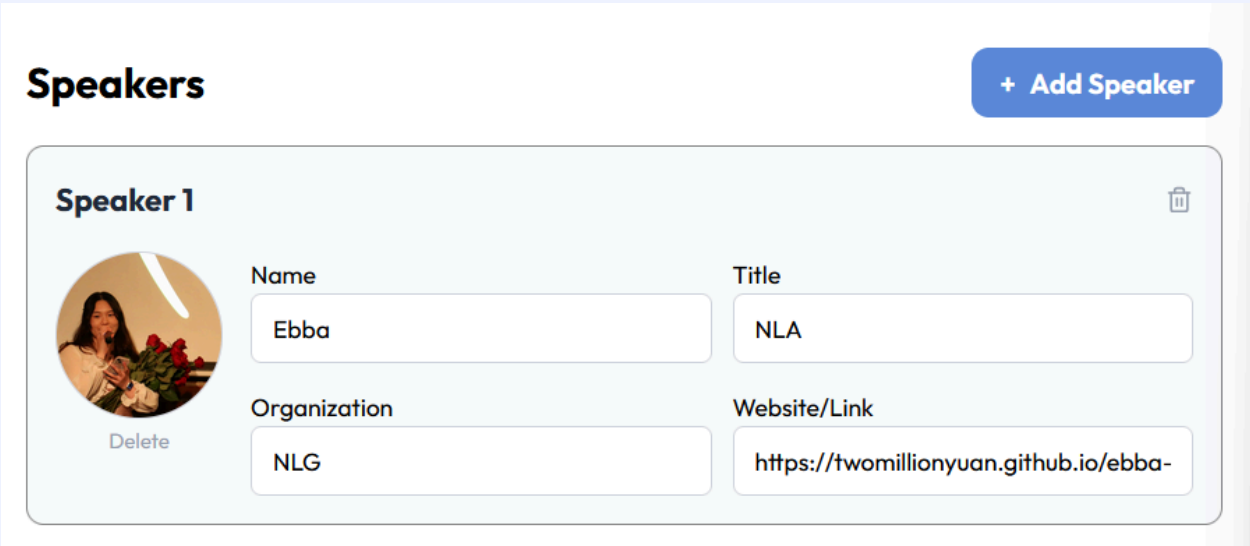
Speakers

Adding Speakers

Go to the Speakers tab in your event. For each speaker, provide:

- Name, job title, and organization
- Profile photo
- Relevant link (LinkedIn, X/Twitter, personal site)

The order determines how they appear on the public event page.



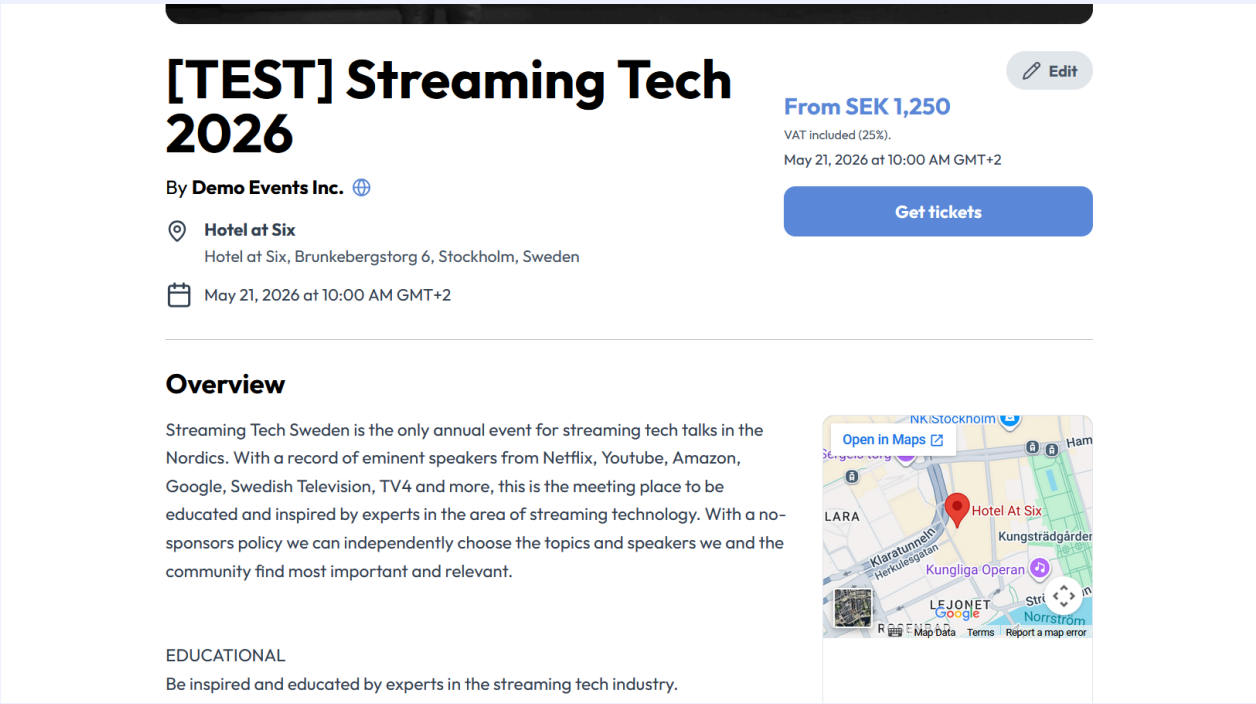
Speaker management — speaker card example

SECTION 07

The Attendee Experience

This section describes what ticket buyers see when they visit your event page — useful for setting expectations and testing the full flow yourself before going live.

Take a look at this example: https://events.apps.osaas.io/events/test-streaming-tech-2026-ea0e2eb7



Public event page — full-width view with tickets panel

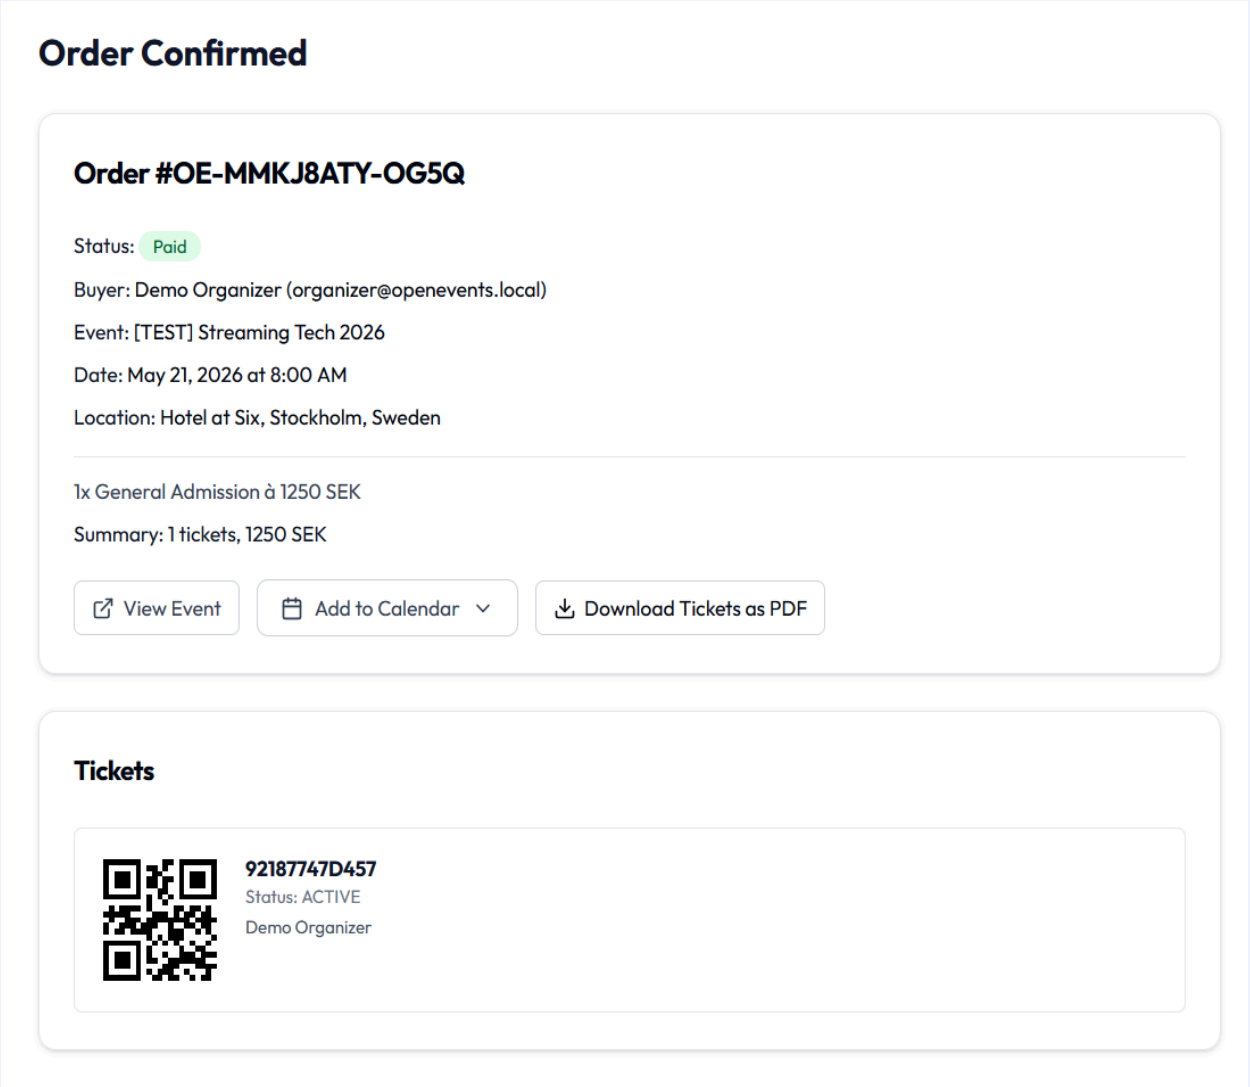
Checkout Flow

1. Select ticket types and quantities.
2. Apply a discount code (optional).
3. Enter buyer contact information.
4. Enter per-ticket attendee details (name, organization, etc.).
5. Choose payment method: Pay with Amazon, Klarna or Card (fhrough Stripe) or invoice.
6. Complete payment — order confirmation page shown immediately.

Ticket Delivery

After a successful order, the buyer sees a confirmation page where they can download their PDF ticket(s). If email delivery is configured (**not in this current version**), a confirmation email with the tickets is sent automatically.

IMPORTANT: Email delivery requires setup from an existing email address OR a third-party mail service (e.g. SendGrid) configured by you. Test email delivery before ticket sales go live.

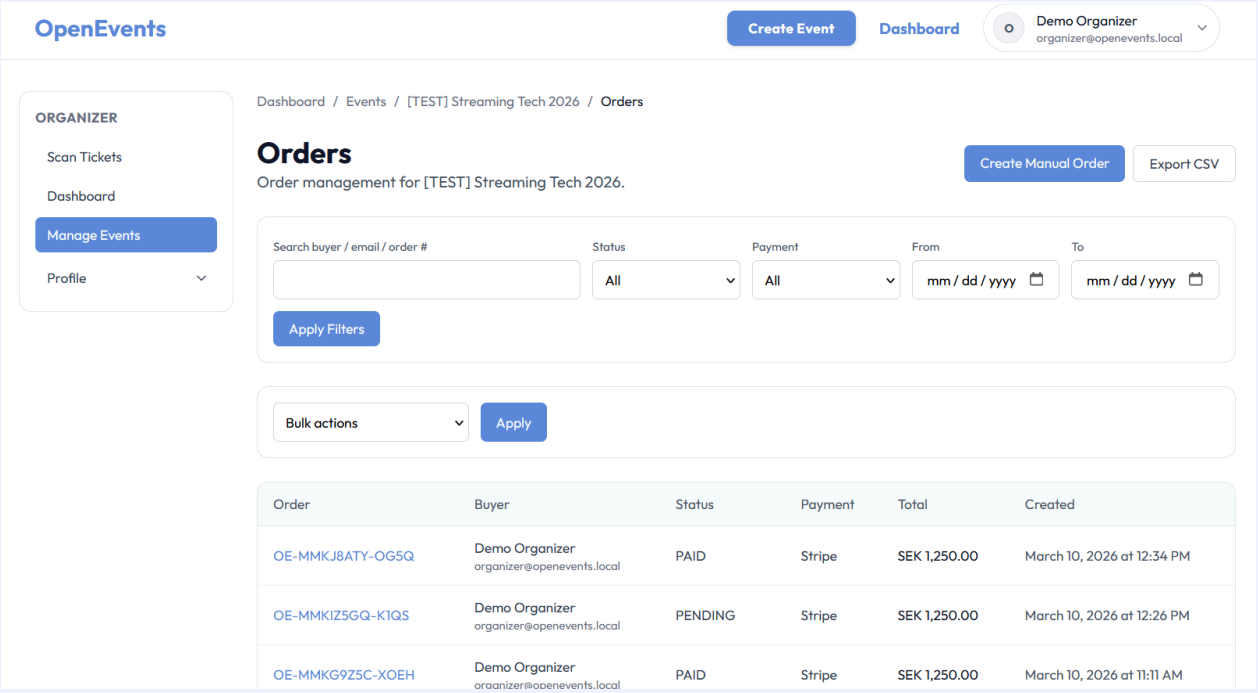


Order confirmation page as seen by attendees

SECTION 08

Managing Orders

Go to *Dashboard* > *[Event name]* > *View Orders* to view, search, and manage all orders.



Orders tab — order list with status filters and search bar

Order Statuses

Pending	Checkout started but not completed.
Paid	Card payment completed successfully.
Pending Invoice	Buyer requested an invoice — awaiting payment.
Cancelled	Order was cancelled.
Refunded	Full or partial refund has been issued.

Actions

- **Search & filter —** Filter orders by status, payment method, buyer email, order number or date range.
- **View order details —** Buyer info, ticket breakdown, and payment summary.
- **Process refunds —** Full or partial, directly from the order detail view.
- **Create manual (invoice) orders & mark them as paid —** Done in coordination with those who request to pay by invoice.
- **Bulk cancel —** Cancel multiple pending orders at once.
- **Export to CSV —** Download the full order list for reporting.

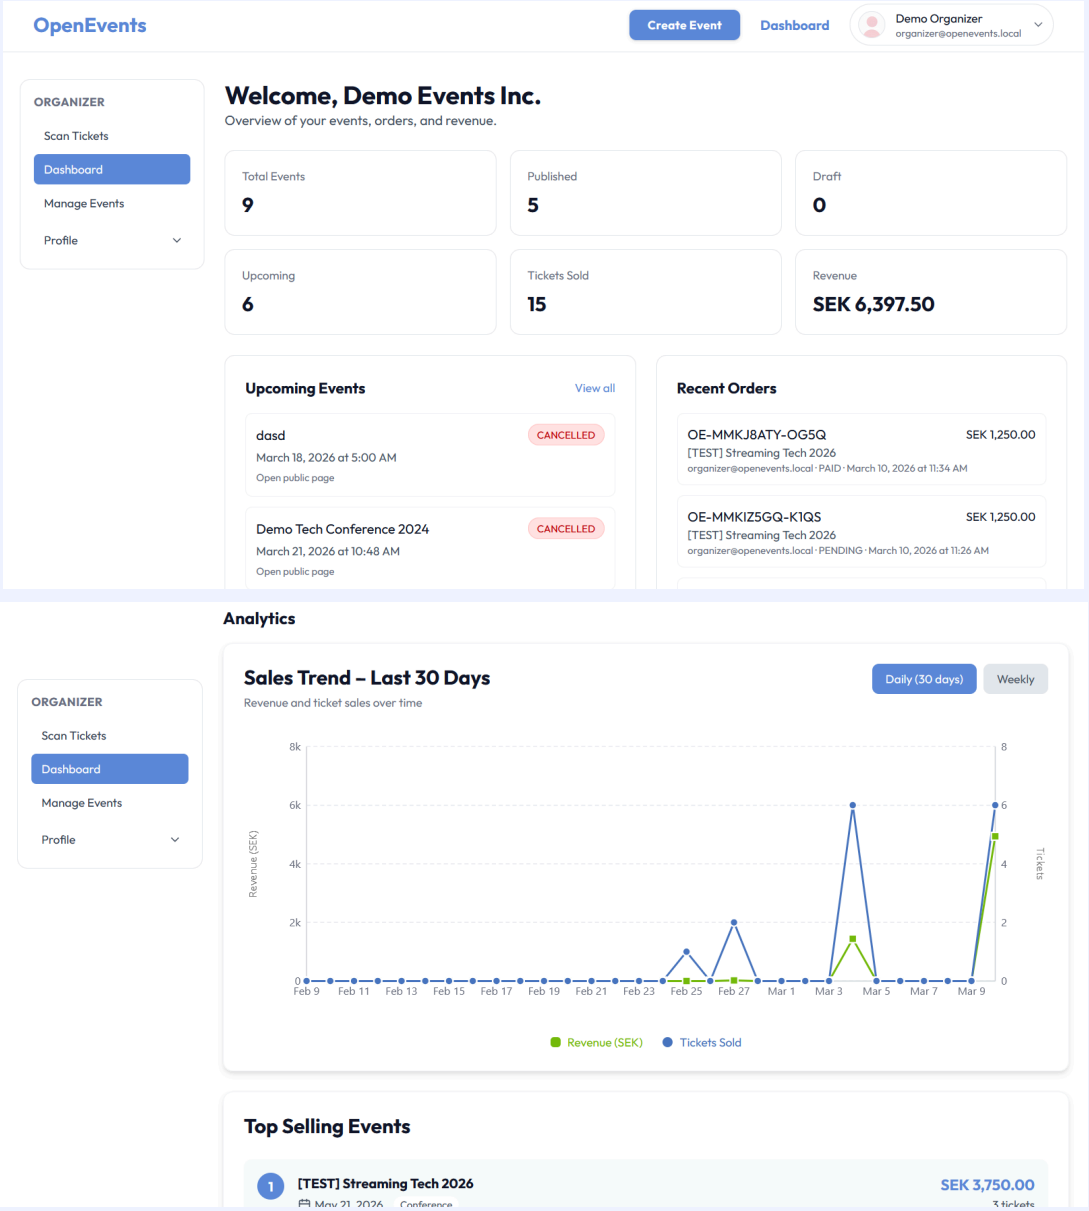
SECTION 09

Sales Statistics & Analytics

Dashboard Overview

The main dashboard shows a snapshot of your platform activity:

- Total revenue, tickets sold, and count of published vs. draft events.
- 30-day sales trend chart (daily revenue + ticket volume).
- Top-selling events.
- Recent orders table.

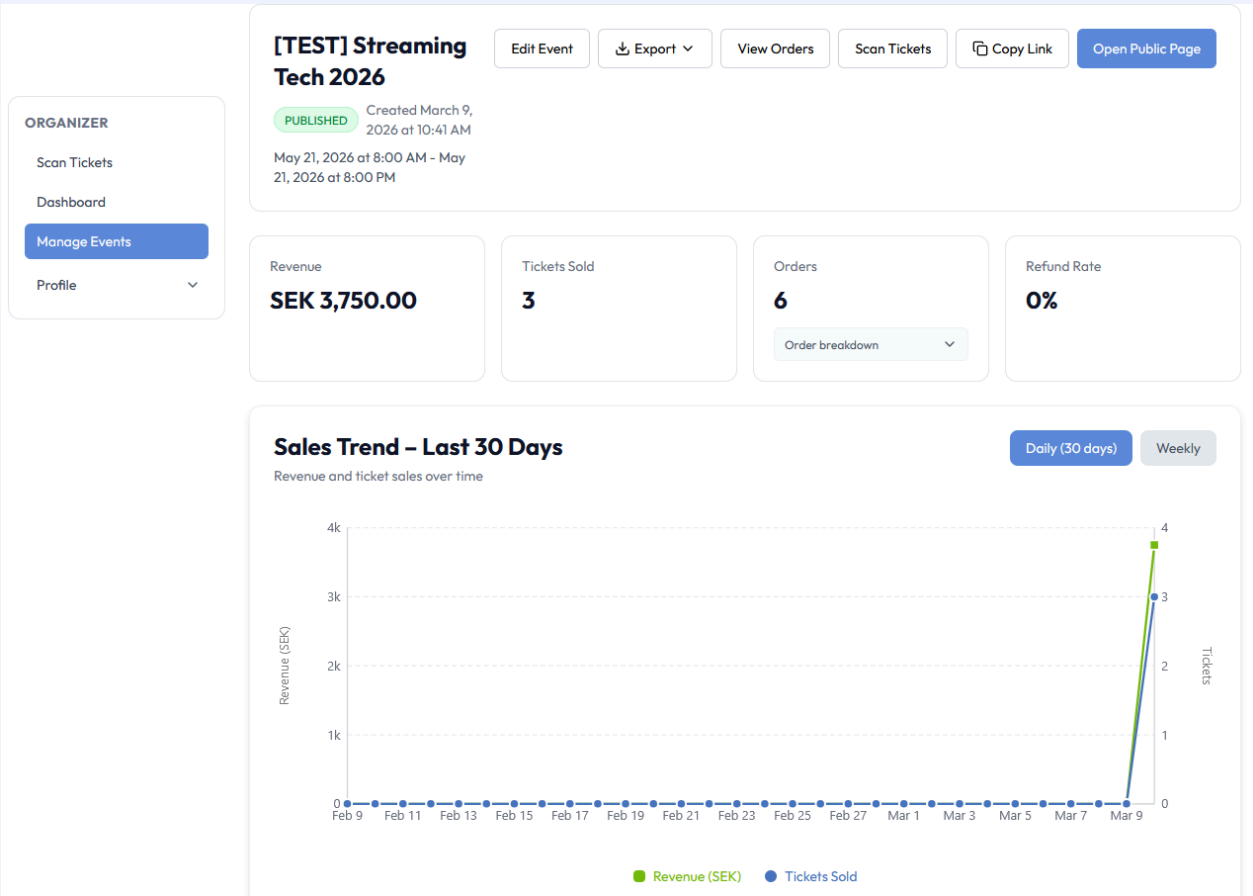


Dashboard home — overview cards and 30-day sales chart

Per-Event Analytics

Open an event for a detailed breakdown:

- Total revenue, tickets sold, and order counts.
- Revenue and capacity breakdown by ticket type.
- Paid / pending invoice / cancelled / refunded order counts.
- Refund rate percentage.
- 30-day sales trend chart for this specific event.



Per-event analytics — ticket type breakdown table and trend chart

You can also export full attendee lists from your event. Choose CSV or Excel format.

Available Data Fields

- Attendee name
- Email address
- Organization
- Job title
- Ticket type
- Order reference
- Check-in status
- Order date

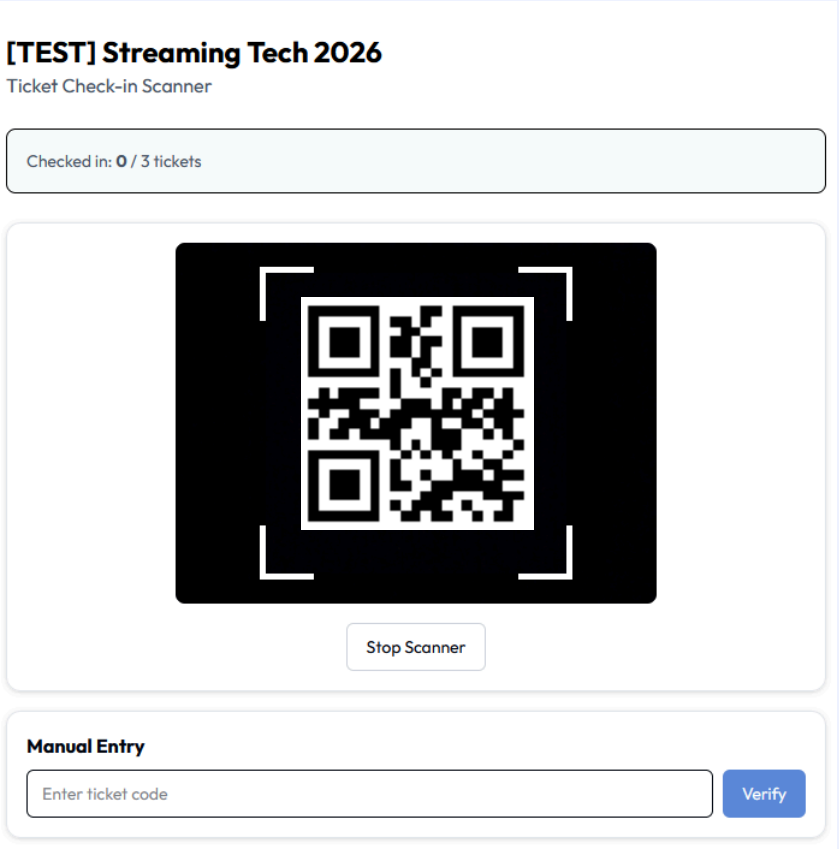
Common Use Cases

- **Badge printing —** Export before the event and import into your badge template.
- **Post-event follow-up —** Email attendees with slides, recordings, or surveys.
- **Reporting —** Share attendance figures with sponsors or stakeholders.

SECTION 10

Event Day: QR Code Check-In

OpenEvents includes a built-in ticket scanner — no third-party app required. Access it from your event dashboard or the quick-scan shortcut.



QR scanner screen on a mobile device — valid ticket confirmation

How It Works

1. Access OpenEvents on your phone or tablet, log in as an organizer and navigate to the event: *Dashboard > Manage Events > [Event name] > Scan Tickets*
2. Point the camera at the attendee's QR code (printed or on-screen).
3. The scanner validates the ticket and marks it as used in real time.
4. A green confirmation (valid) or red error (already used / invalid) is shown on the scanning device.

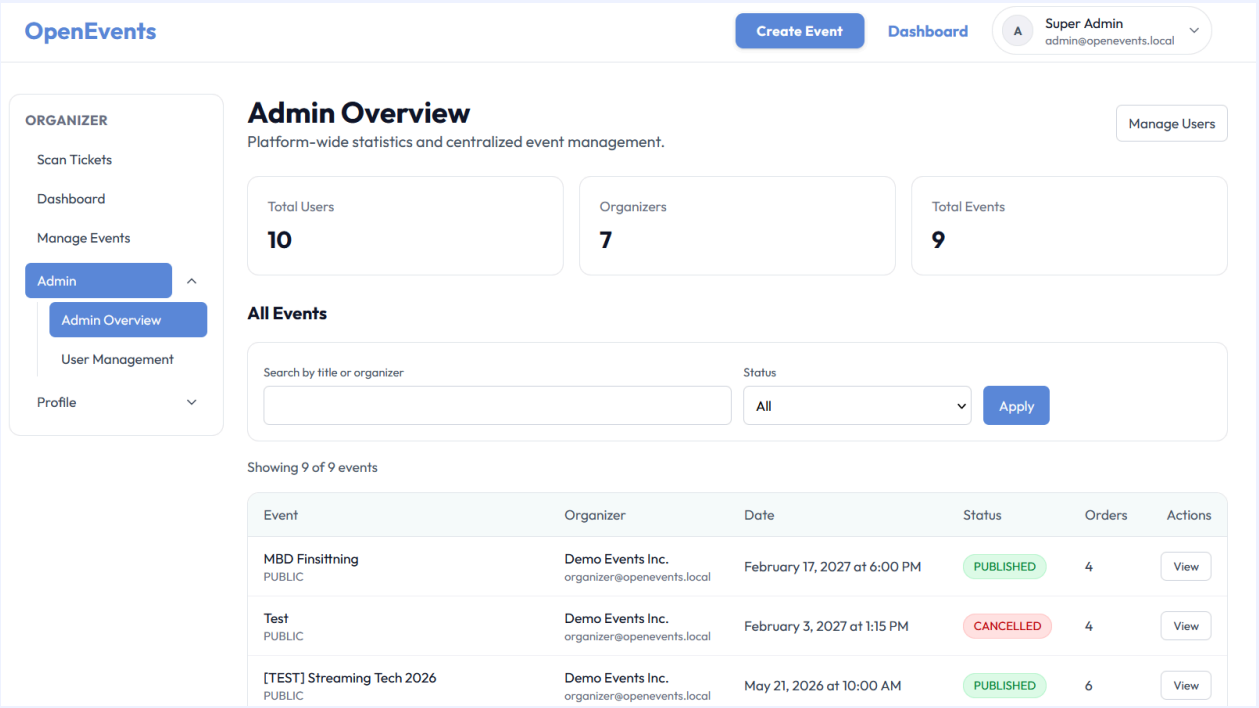
Real-Time Stats

The scanner shows a live count of checked-in attendees vs. total expected — useful for tracking door progress throughout the event. Multiple devices can scan simultaneously.

SECTION 11

Admin Panel (Super Admins Only)

The Admin Panel is accessible only to users with the Super Admin role. It provides platform-wide oversight and control.



Admin overview panel

What Super Admins Can Do

- View platform-wide statistics: total revenue, events, orders, and users.
- See all events across all organizers.
- View and manage user accounts.
- Assign or change user roles (Organizer, Super Admin).
- Create new accounts with one-time passwords for onboarding new organizers.

NOTE Only grant Super Admin access to trusted platform operators. Super Admins can see all data across all events and manage all users on the platform.

SECTION 12

Good to Know

Email Delivery

As it is, confirmation emails and tickets won’t reach buyers. A third-party email service (e.g. SendGrid, Postmark) must be configured by your platform administrator. Contact your admin and confirm email delivery is working before sales go live.

Invoice Payments

When buyers choose to pay by invoice, they are currently directed to contact Eyevinn. If any other organization would want to use OpenEvents, they need to handle their own invoicing, meaning the invoice instructions have to be updated in that case.

No Buyer Accounts

Ticket buyers don't create accounts — this is intentional to keep checkout fast. Buyers access their tickets via the confirmation page and email. Make sure email delivery is working so buyers can retrieve tickets later if needed. They currently can only see their order confirmation once and never again.

SECTION 13

Tips & Best Practices

Publish early

Use Draft mode while building your event. Publish as soon as core details and tickets are ready — early visibility drives early sales.

Set up codes before announcing

Create your discount codes on the platform before sharing them anywhere. This avoids a rush of failed redemptions.

Test checkout yourself

Create a free-ticket code and complete a full checkout before going live. Verify you receive the confirmation email and can download the PDF ticket.

Prepare the scanner

Open the QR scanner on your door device the day before the event. Make sure it has good lighting and a reliable network connection.

Export attendee data early

Download your attendee list the day before for badge preparation. Re-export closer to doors-open time for the latest check-in data.

Confirm email delivery

Send a test order to yourself before ticket sales open. If the email doesn't arrive, contact your platform admin immediately.

SECTION 14

Support & Open Source

OpenEvents is free and open-source software

Built for the community. Contributions, bug reports, and feature requests are all welcome.
